

RADIUS IN FINANCE

What is Radius?

Radius is a situational awareness system featuring Inovonics Positioning Technology™. Designed to link people to events in life safety situations, Radius combines the latest mass notification capabilities with advanced positioning technology to pinpoint the location of duress alarm devices. Serving as the central nervous system of a robust Physical Security Information Management system, Radius monitors a variety of end-devices; interfaces to fire, access control, security, and environmental systems; and provides instant notification to any number of devices, including cell phones, pagers, and two-way radios.

Finance Matters

For more than twenty years, financial institutions have turned to Inovonics for solutions to their security needs. With thousands of systems in use in financial institutions around the globe, Inovonics has a unique understanding of the security needs that financial institutions face. Using Radius, financial employees can discretely alert key personnel of emergency events, ensuring the safety of staff and customers.

Workplace Safety

According to a U.S. Department of Labor survey, "nearly five percent of the 7.1 million private industry business establishments in the United States had an incident of workplace violence within the 12 months prior." In fact, roughly two million Americans are victims of workplace violence every year, and those who exchange money are most at risk. While it is impossible to entirely eliminate the threat of workplace violence, in an emergency situation Radius can direct help when it is needed, where it is needed, and to whom it is needed.

Bank Robbery

Every year, thousands of banks are robbed in the United States. Though monetary losses are usually small, the danger posed to both staff and customers is substantial. No other security system has the ability to direct notification during a robbery like Radius. Not only can the system be integrated with traditional security systems, employees can use the duress alarm capability to alert targeted personnel. Applications could include the sending of discrete text messages to security guards within the bank, or the notification of bank staff in the break room not to return to the lobby. In situations that can turn violent in an instant, nothing allows the discretion or flexibility of Radius.

Finance Applications

- Teller duress
- CCTV camera activation
- Suspicious activity alerting
- Event escalation
- Vault monitoring
- Maintenance reminders
