

the power of integration

COMMERCIAL
Security

MADE
in the
USA

A truly effective commercial security system must be smart, flexible, and adaptable: Smart to provide a combination of intrusion, fire, access control, and both network and cellular monitoring; Flexible to ensure dependable communication between your system and monitoring service; Adaptable to meet current needs but later be expanded or modified as your needs change.

integrated solutions for a safe, secure workplace.

Our technology provides integrated security that combines all of your protection into a single system. Integration means one system to maintain, with all of your security managed via a single, easy-to-use interface.

Our systems offer the flexibility of multiple communication options. Cellular, Network and Dial-up, plus wireless, ensuring that your system successfully signals an alert when help is needed. And our systems are designed with strong forward and backward compatibility to give you the flexibility to expand or modify your protection, rather than replacing what you have and starting over.

RELIABLE SYSTEM COMMUNICATION

Our alarm panels include Dial-up communication, but you can also add Network and Cellular capabilities. Select the options that best meet your requirements for primary communication, and include additional options as backups to ensure constant communication. Data transmission to the Central Station is secure, fast, and fully supervised with both Cellular and Network communications, and meets UL Standard Line Security requirements.

BUILT-IN FALSE-ALARM REDUCTION

False-alarm-reduction features are built into every integrated system we install and are fully compliant with the Security Industry Association Standard for False Alarm Reduction. More than a dozen

features cover the most common causes of false alarms to ensure reliable alarm signaling and emergency response.

INTEGRATED FIRE MONITORING

Our conventional, addressable systems support manual pull stations, smoke and heat detectors, and water-flow supervision. Our network version is the perfect solution for multi-site applications, with remote Internet access for updates and status checks.

MAXIMIZE SECURITY WITH REMOTE CONTROL CONVENIENCE

With our System Link™ software you can remotely arm and disarm the security system, lock or unlock access-controlled doors, add or delete the names of system users, change schedules and holiday dates, and run reports for analysis and evaluation. System Link allows you to gather the information you need for one secure location or for hundreds of locations. If you prefer, we can manage all of these tasks for you as an outsourced service.

CONVENIENCE FEATURES THAT REALLY PAY OFF

Our MyAccess™ Messaging features send you text or email alerts of any system alarms. Choose up to three destinations for the alerts, including cell phone or email addresses. You can also transmit commands to your system via text messages, turning it on or off or checking its status. Can't remember the commands? Just text 'HELP' to your system and it will send you the commands.

Our technology not only helps protect your business, it helps you to better manage your business.

ONE-CREDENTIAL ACCESS CONTROL

Traditional systems require users to present a card for access and then disarm security with a keypad code once inside. Our integrated solutions handle both in one step by initiating authorization, door activation, and security disarming with a single credential.

EASY SYSTEM OPERATION

Our systems are designed for ease of operation. We replaced complex codes with simple keypad menus to guide users through common system functions.

You can also rely on proximity (prox) cards or fobs to enable access to only authorized individuals. The unique Prox Patch adheres to wallets or cell phones. Pass the prox card or Prox Patch over the keypad for codeless arming and disarming.

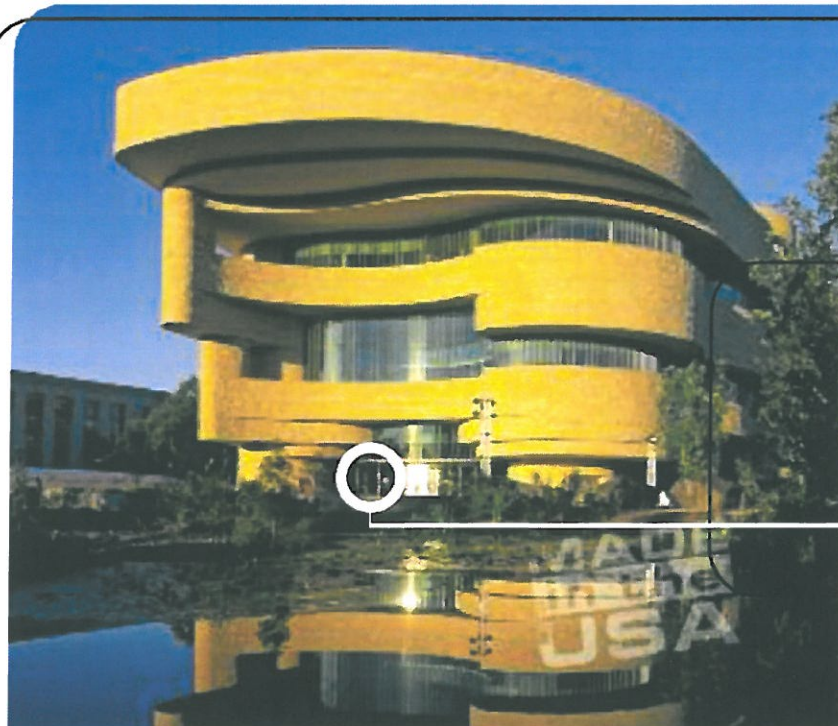

FLEXIBLE, SCALABLE SOLUTIONS

Our technologies are developed in cooperation with facility managers, contractors, and IT specialists, so they are based on real customer needs. Our open-architecture design allows third-party integration, giving you the flexibility to expand or modify your current security system. Add features like CCTV/video, environmental and process control systems, and new detection devices with our flexible, scalable solutions.

COST SAVINGS AND QUALITY YOU CAN COUNT ON

With our integrated solution, there's only one system for your employees to learn, and only one system to maintain.

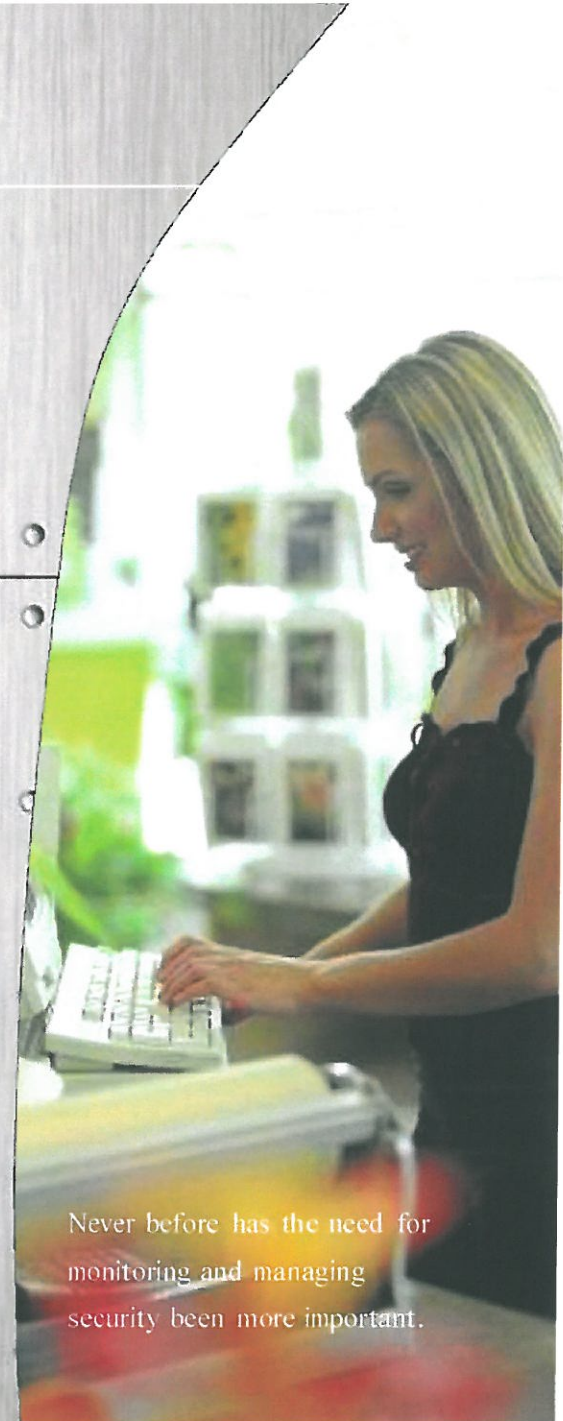

All of our products are designed and made in America to ensure the highest quality. Our technicians are factory certified to maintain the highest standards, and service and technical support are provided from here in the U.S. not halfway around the world.

Our open-architecture security platform integrates with third-party technologies for solutions that work together as a team.

*features to help you both protect
and manage your business.*

- ▶ COMBINE BURGLARY AND FIRE PROTECTION WITH ACCESS CONTROL IN A SINGLE, EASY-TO-USE SYSTEM
- ▶ CHOOSE CELLULAR, NETWORK, OR DIAL-UP COMMUNICATION OPTIONS TO ENSURE YOUR SYSTEM IS IN CONSTANT CONTACT WITH YOUR MONITORING SERVICES.
- ▶ CONTROL YOUR SYSTEM VIA TEXT MESSAGES, AND RECEIVE TEXT OR EMAIL ALERTS OF ALARMS AND OTHER SYSTEM EVENTS
- ▶ KNOW WHAT'S HAPPENING AT YOUR BUSINESS WITH ALERTS WHEN STAFF ARRIVE AND LEAVE, AND REPORTS OF TRAFFIC COUNTS AND EARLY TO OPEN/LATE TO CLOSE
- ▶ EASY OPERATION ENSURES YOUR SYSTEM WILL ACTUALLY BE USED BY EMPLOYEES, WITH FEWER FALSE ALARMS
- ▶ MANAGE YOUR BUSINESS WITH A SINGLE, SIMPLE-TO-USE DMP SYSTEM

Never before has the need for monitoring and managing security been more important.
